EXECUTIVE SUMMARY

2009

During the calendar year of 2009, the Lyndhurst Health Department continued to serve its residents with a wide range of programs and services. Under the direction of Mayor Richard J. DiLascio and Commissioner Brian C. Haggerty, the Health Department's continued with its mission "to promote and protect the public health of our community by using the highest standards for disease control and prevention."

The Lyndhurst Health Department fulfills its primary function of protecting the public health by following the Standards of Performance for Local Boards of Health in New Jersey (Chapter 52; N.J.S.A. 26:1A-15 and 26:3A2-1). The Health Code (Chapter XXII) of the Revised General Ordinances of the Township of Lyndhurst provides further guidance. We work closely with Bergen County's Department of Health Services (BCDHS) to provide professional, skilled, and efficient public health care.

This was a year of challenges and accomplishments for the Lyndhurst Health Department, with H1N1 issues dominating our public health work in 2009. The Lyndhurst Health Department responded to H1N1 activity with public health prevention, preparedness, protection, and action. The year began and ended with influenza-related issues. Seasonal flu concerns were forefront in January, but by April, the first cases of swine flu (H1N1) had been identified. Our health department joined in the campaign to prevent the spread of H1N1. We collaborated with health departments of surrounding towns to determine how best to protect the public.

Our continuing H1N1 public health measures incorporated educational and investigational components. We reached out to the public through calls (reverse 9-1-1), emails, newspaper articles, and web postings in order to provide H1N1 health education. We investigated cases of suspected and confirmed H1N1. When the H1N1 vaccine became available in the fall of 2009, we answered questions about vaccination safety and helped our residents gain access to the H1N1 vaccine.

By strengthening our partnership with the Lyndhurst Board of Education school nurses, we were able to develop and implement a plan to vaccinate all school-aged children against H1N1. We held four H1N1 vaccination clinics in the last two months of 2009. These clinics were staffed by Township and BOE nurses.

New programs were introduced to positively impact the health of our community; participation increased as residents learned about our programs. We offered interactive workshops to teach residents how to manage their chronic illnesses and to become advocates for their own health. Many of our programs were made possible through our continuing partnerships with the Defining Moment Foundation, the Lyndhurst Municipal Alliance, Clara Maass Medical Center, and the Meadowlands Area YMCA.

The Lyndhurst Health Department produced its first newsletter, *The Health Advocate*. Our goal was to reach all households in Lyndhurst so that the public has a better understanding of our programs and services.

The Public Education and Awareness Program was introduced by Commissioner Brian C. Haggerty. *Mannerly Speaking*, designed and taught by Commissioner Haggerty, was the first course presented in this series of seminars intended to assist residents advance their careers and lives.

The Lyndhurst Food Pantry continued to grow, with increased need in the community and increased donations. Within one year we grew from serving 10 families to 112 families. St. Thomas Episcopal Church held two food drives which restocked the food pantry. The Woman's Club of Lyndhurst adopted the Lyndhurst Food Pantry as their Community Improvement Project for 2009. By year's end, volunteers from the Woman's Club staffed the Food Pantry five days a week.

Environmental Safety remained a priority in 2009, with the public health risk assessment and clean-up of the former Penick site continuing. The New Jersey Department of Environmental Protection (NJDEP) conducted testing of homes. The report by the New Jersey Department of Health and Senior Services (NJDHSS) and the Agency for Toxic Substances and Disease Registry (ATSDR) is expected by March 2010. It should include an analysis of the site along with recommendations.

The Lyndhurst Health Department continues its efforts to promote public health and healthy lifestyle choices through our ongoing screening programs, health inspections, communicable disease surveillance, and health education classes. We strive to serve as a health resource for our community and assist with access to health care. Our staff participates in training for emergency preparedness, pandemic planning, bioterrorism, and health education.

Under the leadership of Commissioner of Public Affairs, Brian C. Haggerty, the Lyndhurst Health Department will continue with its goal of ensuring that Lyndhurst is a town with healthy people in a healthy community.

The following report is respectfully submitted,

Joyce Jacobson

Joyce Jacobson
Health Administrator
Chair, Health Council
Lyndhurst Health Department
January 31, 2010

Office of Vital Statistics:

The Lyndhurst Health Department serves as the Office of Vital Statistics, with the recording of births, deaths, and marriages. Official certified copies of records are obtained through this office. Our two registrars are New Jersey State licensed, requiring continuing education to ensure compliance with changing laws. With new passport regulations and security concerns of the Department of Motor Vehicles, the Health Department has seen an increased demand for certified copies of marriage licenses and birth certificates. Marriages performed by the mayor occur in the Health Department. Net revenue generated from vital statistics, animal licensing, food establishment licenses, and all other licensing totaled \$75,967.00.

The following licenses and applications are processed in this office:

Marriage/Civil Union/Domestic Partnership	Food Establishments	Dryers
Vending Machines	Laundromats	Dry Cleaners
Dog and Cat Licenses	Washing Machines	Commercial Pools
Pet Salons	Permanent Cosmetics	

Health Education:

2009 brought change and growth to the Lyndhurst Health Department. Educational information was provided in the local newspapers and on the Health Department’s web site at www.lyndhursthealth.org. We introduced our first newsletter, *The Health Advocate*, with a goal of reaching the approximate 9,400 households in Lyndhurst so that the public has a better understanding of our programs and services. We developed a booklet, *My Health Care Records*, to assist residents in having comprehensive records of their health care.

In order to promote healthy lifestyle choices, we expanded our Health Education Series. Our weekly yoga classes continued. A six-part new series, *Living a Healthy Life with Chronic Conditions*, taught self-management skills to seniors so that they could better manage their chronic illnesses. We brought back the Defining Moment Foundation to conduct interactive workshops for seniors. The workshops involved topics such as Freedom from Falls and Medicine Cabinet Safety. A brown bag workshop was held at which residents met individually with a pharmacist from HB Pharmacy and reviewed their medications for interactions and side effects. When health reform was forefront in the news, the Lyndhurst Health Department held a Health Care Forum on senior benefits, with State Senator Loretta Weinberg as our keynote speaker.

Health Care Access/Resources:

Since joining Bergen County’s Task Force to Increase Access to Health Care in 2006, the Health Department continues to enroll children in New Jersey’s health insurance program, NJ FamilyCare. Over 60 individuals who previously had no health insurance were enrolled in 2007; an additional 30 were registered in 2008. At the enrollment event on March 14, the Lyndhurst Health Department enrolled over 100 family members in NJ FamilyCare.

Assistance is available throughout the year, with the health administrator helping families to complete their NJ FamilyCare applications. After being present at our Child Health Clinic (CHC) in December and assisting 6 families, NJ FamilyCare has agreed to send a representative to each of the CHC clinics in 2010.

Our web page, accessed at www.lyndhursthealth.org, provides further health announcements, contact information, and resources to assist families in finding health care.

Screening Programs: All screening programs require participants to have a personal physician since we do not want residents to self-diagnose and self-treat. We want to ensure that participants have a physician to turn to if there is a problem. Residents are charged a fee only if a laboratory fee is involved.

1. **Women’s Health Clinic:** These free clinics (Feb.10 and Oct 6) saw a great increase in participation as Clara Maass Medical Center (CMMC) waived all fees for this program, including a free thin prep pap smear. CMMC provided the health educator to teach breast self-examination. Breast and pelvis examinations were performed by Dr. Cheatam, a Rutherford gynecologist. Total participants: 37.

Women’s Clinic	2009	2008	2007
Participants	37	26	22

2. **Blood Screening:** Multi-phasic blood testing was offered in June and December. Participants are required to have a personal health care provider. Total participants: 115.

Blood Screening	2009	2008	2007
Participants	115	129	128

3. **Personal Health Consultations:** Conducted monthly by the nurse, there were 79 individual consults in 2009. Only 33 residents took advantage of this program which is designed as a health and lifestyle assessment. Most often, this program is used by residents wanting a blood pressure check. A goal for 2010 would be to improve outreach and participation.

4. **Men’s Clinic:** Increased outreach and education is needed to encourage participation since this clinic consists of a rectal exam to check the prostate. Blood is drawn to check PSA levels and stools are checked for blood. We cancelled our 2009 clinic because of poor participation but were able to get the 3 men interested in this clinic free care at another location. CMMC agreed to lower the fee for the PSA laboratory test so our health department will offer this test free to Lyndhurst residents as a means of trying to stress the importance of men’s health and prostate exams.

5. **Eye Clinic:** In 2007, our two eye clinics were cancelled because of lack of interest. We scheduled one eye clinic for 2008. Participants: 15. Our outreach efforts were successful in 2009 as we had 18 participants at the eye clinic.

6. **Lifeline Radiology:** This independent company scheduled two clinics in 2009. Four tests check for carotid artery blockage, abdominal aneurysm, peripheral arterial disease, and decreased bone density. In spite of the fees involved, 198 people participated in 2009 (total of 147 tests).

Lifeline Radiology	2009	2008	2007
Participants	198	41	98
# of clinics	2	1	2

7. **Skin Cancer Screening:** Dr. Morman returned for the second year to perform free skin cancer screening for 68 Lyndhurst residents. While no melanomas were found, he referred 19 residents for follow-up.

Communicable Disease Investigations:

In order to prevent the spread of communicable diseases, the New Jersey Administrative Code (N.J.A.C. Title 8, Chapter 57) provides for regulatory control through the New Jersey Department of Health and Senior Services. Some diseases are reportable to the state while others are reportable to the local health department. By using the Communicable Disease Reporting and Surveillance System (CDRSS), the Lyndhurst Health Department is able to track diseases and protect the public health.

In 2009, there were 108 cases entered into the CDRSS by the Lyndhurst Health Department, a 37% increase in the number of disease investigations since the previous year. While not every positive laboratory test was a confirmed active disease, each of these cases involved an investigation. Investigations included possible cases of Hepatitis A, Hepatitis B, Hepatitis C, Legionellosis, Lyme, Salmonellosis, Shigellosis, Streptococcus pneumoniae, and Varicella.

Disease	2009	2008	2007
Hepatitis B	19	17	13
Hepatitis C	19	34	30
Lyme Disease	18	18	8
Novel Influenza A	19	N/A	N/A
TOTAL CDRSS Investigations	108	79	65

TB Testing/Control: Mantoux testing is available for all Lyndhurst residents and BOE employees. There is no cost to the person requesting the test. In 2009, the County called upon our public health nurse to assist with Direct Observational Therapy (DOT) for two residents. DOT is used to directly observe a resident taking anti-tuberculin medications in an effort to prevent resistance and to clear infection.

TB Testing	2009	2008	2007
Mantoux Tests	68	98	86
Positive Tests	3	7	1

Child Health Conferences:

The pediatric well-child clinic is held on the second Tuesday of each month. Our public health nurse, Alison Roa, and our pediatric nurse practitioner, Karyl Reid, provide physicals and immunizations. Since it is recommended that every child receives 30 immunizations before entering kindergarten, this is an important health service for children. In 1994, a federal program, Vaccines for Children (VFC), was implemented to ensure that all children receive their vaccinations. VFC provide the vaccines recommended by the federal Advisory Committee on Immunization Practices. Eligible children include those who have no insurance or are under-insured. Vaccines are received at no cost to the Township. The total number of patient visits in 2009 was 90.

Child Health Conference (VFC)	2009	2008	2007
Total Number of Patient Visits	90	72	76
Number of Different Children *	67	48	57

*numbers do not include H1N1 vaccinations as they were not given as part of the VFC program

Lead Prevention Programs:

1. Even though lead poisoning is the number one environmental hazard affecting children under the age of six, it is a preventable disease. The American Pediatric Association recommends that all children receive a lead test at the ages of 1 and 2. No blood tests were performed in 2009 by our public health nurse since most of the children have this test done by their pediatricians.

2. When New Jersey expanded its Wipe-Out-Lead NJ program in 2006, the Health Department contacted the state to join. The state-funded program provides kits which parents can use to test the insides of their homes with a goal of identifying lead contaminated homes before a child ingests lead. Parents are provided with pre-paid postage envelopes to return the tests; the Township receives the kits at no cost. 22 kits were given to parents in 2009.

3. Lead investigations: When a child has an elevated lead level, a public health investigation is conducted by the public health nurse. This includes interviews with parents, home visits, educational services, and a health inspector home visit to identify potentially contaminated areas.

Number of New Lead Investigations		
2009	2008	2007
0	4	3

School Audits: Every year, all daycares and preschools must have their students’ immunization records audited by our public health nurse. Audits for grades K- 12 are required every three years, with the audit last performed in 2007. Eighteen schools were audited by the public health nurse in 2009.

Newborn Letters: All parents of newborns are sent a welcome letter by the Health Department. Health-safety educational materials are included along with contact information for a variety of programs. 188 newborn packets were sent in 2009.

Newborn Letters		
2009	2008	2007
188	199	163

Medical Transportation:

We provide weekday transportation to medical appointments for Lyndhurst residents. Our priority is to provide service for dialysis patients. We provided free transportation to the following towns: Lyndhurst, North Arlington, Kearny, Harrison, Bloomfield, Nutley, Clifton, Rutherford, Wallington, Carlstadt, Passaic, Belleville, Paramus, Ridgewood, Teaneck, and Newark.

Over 2600 one way trips were provided, covering more than 20,000 miles in 2009. This program brought many challenges: high gas prices, vehicles needing numerous repairs, and scheduling issues. Many people request rides at the last minute even though we request seven- days notice. Appointments in different locations are difficult to accommodate. A successful grant application to the New Jersey Meadowlands Commissioner enabled the Health Department to purchase a new vehicle to provide the medical transportation service. This 2009 van is handicapped-access with a wheel chair lift; it seats 8 plus a wheelchair.

Environmental Protection:

In 2008 and 2009, the Lyndhurst Health Department worked closely with governmental agencies at county, state, and federal levels to address past and present environmental issues concerning possible environmental exposures.

In 2008, the New Jersey Department of Health and Senior Services Cancer Surveillance Program determined that there is *not* a cancer cluster in Lyndhurst. These results were supported by another analysis, a standardized incidence ratio (SIR) which found that all cancers combined were “not statistically elevated in Lyndhurst.” In spite of these results, the Lyndhurst Health Department reached out to the New Jersey Department of Health and Senior Services (NJDHSS) and the Agency for Toxic Substances and Disease Registry (ATSDR) and requested a public health risk assessment of the former Penick site. The ATSDR public health evaluation report is expected by March 2010 which will include an analysis of the site along with recommendations.

Blood Borne Pathogen Safety Training:

In 1993, New Jersey passed the Public Employee Occupational Safety and Health Act (PEOSHA) in order to protect public employees from job-related exposures to blood borne pathogens (BBP). This mandate requires the Township of Lyndhurst to: 1) identify employees at risk, 2) provide education, 3) provide safety equipment, 4) offer free Hepatitis B vaccinations to these employees, and 5) have a readily available Exposure Control Plan. The Township employees have responsibilities under this law. Employees must: 1) attend the educational sessions, 2) decide whether they want the hepatitis B vaccine series, and 3) follow PEOSHA guidelines for Protection and Reporting.

The Health Administrator and Public Health Nurse developed and taught the 2009 course. Discouraged with past low compliance rates (less than 60% in 2006), we worked closely with each department to ensure improved compliance. We continue to assess methods and work with department heads to determine the best method for compliance.

BBP	2009	2008	2007	2006
Compliance Rates for Educational Classes	80%	72%	81%	<60%
# of Courses provided (group/individual)	6/7	9/5	13	Bergen County classes (2)
Hepatitis B shots given BOE	15	15	28	32

Health Inspections: The Township contracts with Bergen County for Sanitarian (Health Inspector) services. With 167 food establishments and approximately 200 complaints, this requires a full time position. The Health Inspector investigates animal bites, rodent complaints, heat concerns, public nuisance complaints, food safety issues, and environmental concerns.

Food Establishment Inspections:

Lyndhurst had 167 licensed food establishments in 2009; each requiring an inspection by the Health Inspector. Food establishment inspections follow New Jersey law (Chapter 24, N.J.A.C. 8:24). Each inspection report generates a satisfactory, conditional, or unsatisfactory result. If an unsatisfactory rating is determined, the restaurant is closed; there were no unsatisfactory results in 2009.

A re-inspection fee of \$200 became effective on 01/01/09; it was introduced to encourage food handler compliance and to cover the cost of the health inspector. Forty-two conditional reports were given, requiring at least one additional visit by the health inspector to ensure food safety for the public’s health.

Animal Control:

1) The Township contracts with the County for animal control services. Animal Control Services include stray animal patrol and housing, rabies control and testing, quarantine services for strays, and trappings of feral and dangerous animals.

2) 2007 brought the first-known confirmed case of rabies to Lyndhurst; another laboratory-confirmed case of a rabid raccoon occurred in 2008. In 1989, Rabies has been a significant concern in NJ since 1989, at which time rabies was discovered in a land-based animal (raccoon). Since rabies is a fatal disease, the health department reaches out to the Township to notify its residents whenever a case is discovered. Our outreach efforts include a variety of efforts: newspaper announcements, web postings, and reverse 9-1-1. We are pleased to announce that there have been no further cases of rabies in Lyndhurst.

3) State law mandates that dogs be licensed. Township ordinance calls for the licensing of cats and dogs. Public compliance is difficult to achieve, with many residents having unlicensed cats and dogs. The Health Department licensed 1,024 dogs and 103 cats in 2009. Our 2009 animal licensing fees brought the first increase in over 20 years.

Licenses	2009	2008	2007
DOGS	1,024	994	1,015
CATS	103	93	75

Dog Licensing Fees	Cat Licensing Fees
Not fixed: \$15.00	Not fixed: \$ 10.00
Fixed: \$10.00	Fixed: \$ 5.00
Owner is a Senior & Dog is Fixed: \$5.00	Owner is a Senior & Cat is Fixed: \$ 3.00
2009 Dog and Cat Licensing Revenue: \$10,330	

4) Rabies Vaccination Clinics: We hold two evening rabies clinics every January to assist our residents in obtaining free rabies shots for their cats and dogs. Licensing can also be completed at these clinics. We hold the dates in January to assist residents in getting the shot required before licensing can be completed. We order 200 rabies shots from the State of New Jersey each year for this purpose.

Rabies Clinic Vaccinations	2009	2008	2007
Dogs and Cats	176	172	110

5) Animal Bites and scratches are investigated by the Health Inspector. We work closely with the police department to receive notices of all reports. Animal Bite investigations performed by our health inspector numbered 19; a nursing investigation was required in 17 cases. The Township ordinance now requires a veterinarian to release the biting animal from quarantine; previously the health inspector performed this task.

Bite Investigations	2009	2008	2007
Health Inspector	19	34	31
Nurse	17	25	6

6) No dead crows reported in 2009 (no known West Nile Virus).

Seasonal Flu Shots:

As part of our preventative public health services, the Health Department continues to provide free flu shots to all Lyndhurst residents who are 18 years of age and older.

The Township of Lyndhurst pays for the cost of the seasonal flu shots, but many factors make it difficult to know how many seasonal flu shots to order. In past years, there has been both a real and a perceived flu vaccine shortage. Since we are dependent upon the supplier, we are unable to know when the vaccines will arrive. In recent years, many residents received their flu shots at local pharmacies or their doctor’s offices because they had received the shots earlier than we did.

Flu shots are not returnable, so we are responsible for the cost of unused doses. In an attempt to lower the cost of the program, we began ordering flu shots through the County in 2007. This allows us to take advantage of their billing services. Instead of paying up front for the flu shot doses, we are billed the cost after subtracting reimbursement for Medicare residents; we are not billed until their billing process is complete. The billing cycle is approximately one year behind.

Seasonal Flu Shots	2009	2008	2007	2006
# doses ordered	700	700	900	950
# doses given	700 (100%)	661 (94%)	652 (69%)	556 (58 %)
Cost*	---	\$6,714	\$8,583.50	\$11,904

* Does not include cost of staffing

Flu shots for the 2010-2011 season must be ordered by February 2010; we will increase this order to 800 doses since we did not have flu shots for everyone who requested one this year. This occurred for two reasons: 1) more people requested vaccines in light of the H1N1 public education effort, and 2) the federal government had requested makers of flu vaccine to concentrate on producing more H1N1 vaccine rather than on producing the seasonal flu shots.

H1N1 Flu Vaccinations:

April of 2009 brought the first cases of H1N1, also known as Novel Influenza A or swine flu. Our health department collaborated with health departments of surrounding towns as well as with the State and County Health Departments to determine how best to protect the public. We worked closely with the Board of Education to develop a plan to ensure that all parents who wanted their children to be vaccinated would have access to the vaccine. When the H1N1 vaccine became available in late fall of 2009, we were ready to vaccinate the targeted populations identified by the Centers for Disease Control.

The H1N1 vaccination target populations included: 1) pregnant women, 2) healthcare and emergency medical service workers, 3) children from 6 months through 18 years of age, 4) young adults 19 through 24 years of age, 5) people living with or caring for children younger than 6 months of age, and 6) people aged 25 through 64 years of age who had health conditions with higher risk of medical complications from the flu.

We received over 800 vaccines at no cost from the State of New Jersey and held four H1N1 vaccination clinics in the last two months of 2009. These clinics were staffed by Township and BOE nurses.

Medical Equipment:

We have a supply of crutches, wheelchairs, walkers, canes, and commodes to loan to Lyndhurst residents. Deposits are refunded when items are returned.

Food Stamps:

A representative of Bergen County Board of Social Services assists residents with completing applications for food stamps at the Health Department once a month. With budget cuts, the county had proposed changing the visits to every other month. After receiving a letter from our health department, the Bergen County Board of Social Services agreed to continue sending a social worker every month. For Welfare inquiries, residents are referred to Bergen County Welfare Office.

Project Backpack:

School supplies were provided to Lyndhurst students in need. Residents donated backpacks and school supplies to make this project a success. NJ FamilyCare applications were distributed in the backpacks with a goal of reaching families in need of health insurance. Over 50 backpacks were distributed before the school year began.

Advance Directives:

Commonly known as “Living Wills,” advance directives allow individuals to protect their health care decisions and choices. Individuals can choose to state specific health care choices (i.e. “Do everything medically possible in every situation,” “Never place me on a respirator”) or can name a specific person to make decisions if the individual is no longer capable. The health administrator is available to assist residents with completing their Advance Directives at no cost (individual consultations with 6 residents in 2009).

Food Pantry:

With the downturn of the economy and increasing unemployment, more families are turning to our pantry for help. We were assisting approximately 10 families (33 individuals) at the close of 2008. By the end of 2009, this number had grown to 112 families (295 individuals). Local schools, businesses, churches, social organizations, and numerous individuals have donated. St. Thomas Episcopal Church held two food drives which restocked the food pantry. The Woman’s Club of Lyndhurst held multiple food drives and adopted the Lyndhurst Food Pantry as their Community Improvement Project for 2009. During the Thanksgiving and Christmas holidays, many participating families were “adopted” by individuals and social groups to receive meals and gifts.

Lyndhurst Municipal Alliance:

With the Health Department’s successful grant application to the County’s Municipal Alliance to Prevent Alcohol and Drug Abuse, we were awarded \$12,933 for 2009. While the grant funds were administered through the Health Department, the funds were used town wide. Health programs sponsored by the Lyndhurst Municipal Alliance included the Fifth Grade Health Fair, the Defining Moment Foundation Workshops, DARE, and Junior Police. The Community Experience continued with Dan Davis returning to address high school students about alcohol and drug addictions.

School Outreach/Coordination:

1. Health Fair: The 3rd Annual 5th Grade Health Fair brought 200 students to the health department. Stations of health included alcohol/drug education, proper hand washing, dental health, backpack safety, first Aid, a nutrition Wheel of Fortune, and dangers of smoking.
2. Hand-Washing Lessons: The nurse and health administrator visited every kindergarten class in Lyndhurst to teach proper hand-washing.
3. H1N1 Vaccination Clinics: We worked together to develop and implement a plan to vaccinate school-aged children against H1N1. To accomplish this goal, we held four H1N1 vaccination clinics in the last two months of 2009.

Public Education and Awareness:

A new program, *Mannerly Speaking* was designed and presented by our Commissioner, Brian C. Haggerty. With a goal of assisting the public to advance their careers and life, Commissioner Haggerty taught dining etiquette as well as how to dress, speak and act in a business or social setting. High school students as well as senior residents attended these classes.
